## Acknowledgements

We thank Steve Vissault for helping us with the forest dataset, and Daniel W. McKenney and Pia Papadopol for help with the climate data. We are also grateful to Pierre Grondin, Aurélie Chalumeau and Marie-Claude Lambert, as well as one anonymous reviewer for providing many helpful suggestions and comments that improved our manuscript. This research was supported by Natural Sciences and Engineering Research Council of Canada (NSERC) research grant no. 7738 to PL and no. 5134 to MJF.

## Biosketch

Marie-Hélène Brice is a Ph.D. candidate at Université de Montréal. She is interested in the natural and anthropogenic processes that structure biodiversity spatially and temporally, with a special interest for vegetation. She uses taxonomic and functional approaches to understand the link between the ongoing global change and community reorganization.
