## 15 Acknowledgements

- 16 This research was supported by Natural Sciences and Engineering Research Council of Canada (NSERC)
- 17 research grant no. 7738 to PL and no. 5134 to MJF. We thank Steve Vissault for helping us with the forest
- dataset, and Daniel W. McKenney and Pia Papadopol for help with the climate data.

### 19 Biosketch

- Marie-Hélène Brice is a Ph.D. candidate at Université de Montréal. She is interested in the natural and
- 21 anthropogenic processes that structure biodiversity spatially and temporally, with a special interest for
- 22 vegetation. She uses taxonomic and functional approaches to understand the link between the ongoing
- 23 global change and community reorganization.
